

## Human+

In the near future the spread of augmentation through advanced medical prosthetics and commercialized elective implants creates a divide in what it means to be human. The perceived danger posed by this new facet of humanity sparks violence, fear, and global unrest, leading governments to pass laws that require all hybrid humans to register themselves. Thrust into the center of this debate is Logan, the hybrid son of two pioneers in the field of human augmentation. His position as a figurehead for the Ingram Corporation provides him with a voice but also paints him as a target. In a society that is on the brink of collapse, Logan must make choices that risk the safety of those he loves and threatens to fracture his identity in the growing rift between what is and is not human.
